JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

XIV. *Extract of a Letter from Simon Peter Pallas, M. D. of Berlin, to Mr. Emanuel Mendez da Costa, Librarian to the Royal Society, relating to the State of the State of the Cold there last Winter, dated Feb. 12, 1763.*

Read March 3, 1763. **W**E have had great frosts here, as indeed all over Germany. I have observed myself, on the twenty-seventh of December of last year, a little after seven o'clock in the morning, the Cold to have been so excessive, that the mercury in the thermometer of Fahrenheit stood at four degrees under 0, which is fifteen degrees under 0 of Reaumur's Scale, than which the Cold in 1740 was but very little more intense. Mr. Euler, junior, observed the same day the thermometer at the same degree: about eight and at nine of the clock of that day, the mercury in the barometer stood at the height of 30'' 1''' the like of which never had been observed at Berlin before.

I
